Subject: RE: Request for Alabama T&E species distribution data

Jo,

Thank-you for the T&E species information and cover letter you provided as it is most helpful. In reviewing this information as well as the Alabama DCNR website, I made the observation that Alabama does not classify species with regard status within the state and defers to the federal status list except for "protected species". Is this correct?

Also, although there were status definitions that accompanied the species list by county, I was unable to locate a definition of a protected species in Alabama. Normally species are protected due to decreasing population levels, limited distributions, lack of information, past practices, etc..., but I am unable to conclude what factors contribute to a species being listed as protected in Alabama. I did observe 9 different state regulations that applied to the various species in the table you provided but only found a generic definition of nongame species protected by 220-2-.92
(<http://www.outdooralabama.com/watchable%2Dwildlife/regulations/nongame.cfm>
<<http://www.outdooralabama.com/watchable%2Dwildlife/regulations/nongame.cfm>>

<<http://www.outdooralabama.com/watchable%2Dwildlife/regulations/nongame.cfm>>) online. Can you please provide a brief definition of protected in Alabama and the rationale behind this status?

Thanks again, your assistance is appreciated.

It's all coming back to me. Here's our standard cover letter for sensitive species by county lists. Developing lists by specific sites and buffer areas would be routine and should be completed within 10 days of receiving the request.

Thanks,
Jo

Penny,

I was wondering if you were able to make progress on drafting the data sharing agreement.

Also on Jan. 17 you had requested coordinates of the alternate locations that I was requesting the T&E species information. Coordinates of existing facilities may be considered sensitive information due to

recent world events. Please understand that we are required to assess T&E species occurrence within both 2-mile and 10-mile radii of the alternative sites Barton and Farley, which is why I included Elmore, Coosa, Chilton, Autauga, Houston, and Henry counties within the request far below.

Please let me know if there are any further questions with either the data sharing agreement or specifics on the locations of the sites of interest.

Respectfully,

Subject: Request for Alabama T&E species distribution data
Ms. Thompson and Mr. Lein,

I am an ecologist with Battelle at the Pacific Northwest National Laboratory and I am assisting the Nuclear Regulatory Commission in preparing an EIS to evaluate impacts associated with an Early Site Permit (ESP) for two additional reactor plants at the Vogtle Electric Generating Plant site near Waynesboro, Georgia. Southern Nuclear Operating Company submitted an application for this ESP on August 14, 2006. The application can be found on the NRC website at <http://www.nrc.gov/reactors/new-licensing/esp/vogtle.html>
<<http://www.nrc.gov/reactors/new-licensing/esp/vogtle.html>>
<<http://www.nrc.gov/reactors/new-licensing/esp/vogtle.html>> .

We will evaluate potential impacts to threatened and endangered species at Vogtle as well as alternative sites as part of the EIS. I have been tasked with acquiring threatened or endangered species information within the vicinities of 2 alternative sites to the Plant Vogtle site. Both of these sites are located in Alabama and I was given your names as potential contacts to assist in getting this information.

The Barton site is at the intersection of Elmore, Coosa, and Chilton Counties and the Farley site is in northeastern Houston County on the Chattahoochee River. Since we must evaluate impacts to surrounding environments, I would like to request GIS spatial data layers for all

T&E species found in the following Alabama Counties: Elmore, Coosa, Chilton, Autauga, Houston, and Henry. We have made a similar request of the Georgia DNR and have been able to establish a data use agreement to enable the sharing of these sensitive data.

Please advise on what is programmatically required to enable this data exchange and what data may be available if an agreement can be put into place.

Thanks for your assistance and please email/phone me with any questions you may have.
